2.4 Safety Precautions

Before operating this system, read the following information carefully to protect your systems from damages, and extend the life cycle of the system.

1. Check the Line Voltage
 - The operating voltage for the power supply should be within the range of 100V to 240V AC; otherwise the system may be damaged.

2. Environmental Conditions
 - Place your MH-5752 on a sturdy, level surface. Be sure to allow enough space around the system to have easy access needs.
 - Avoid installing your MH-5752 system in extremely hot or cold places.
 - Avoid direct sunlight exposure for a long period of time (for example, in a closed car in summer time. Also avoid the system from any heating device.). Or do not use MH-5752 when it has been left outdoors in a cold winter day.
 - Avoid moving the system rapidly from a hot place to a cold place, and vice versa, because condensation may occur inside the system.
 - Protect your MH-5752 from strong vibrations which may cause hard disk failure.
 - Do not place the system too close to any radio-active device. Radio-active device may cause signal interference.
 - Always shut down the operating system before turning off the power.

3. Handling
 - Avoid placing heavy objects on the top of the system.
 - Do not turn the system upside down. This may cause the hard drive to malfunction.
 - Do not allow any objects to fall into this device.
 - If water or other liquid spills into the device, unplug the power cord immediately.

4. Good Care
 - When the outside case gets stained, remove the stains using neutral washing agent with a dry cloth.
 - Never use strong agents such as benzene and thinner to clean the surface of the case.
 - If heavy stains are present, moisten a cloth with diluted neutral washing agent or alcohol and then wipe thoroughly with a dry cloth.
 - If dust is accumulated on the case surface, remove it by using a special vacuum cleaner for computers.

- Accessing Setup Utilities
- Main Menu
- Advanced Menu
- Security Menu
- Boot Menu
- Exit Menu

5.1 Introduction

The board MH-5752 < CherryTrail > uses an Insyde BIOS that is stored in the Serial Peripheral Interface Flash Memory (SPI Flash) and can be updated. The SPI Flash contains the BIOS Setup program, Power-on Self-Test (POST), the PCI auto-configuration utility, LAN EEPROM information, and Plug and Play support.

Insyde BIOS firmware is based on the UEFI (Unified Extensible Firmware Interface) Specifications and the Intel Platform Innovation Framework for EFI. The UEFI specification defines an interface between an operating system and platform firmware. The interface consists of data tables that contain platform-related information, boot service calls, and runtime service calls that are available to the operating system and its loader. These provide standard environment for booting an operating system and running pre-boot applications.

The diagram below shows the Extensible Firmware Interface's location in the software stack.

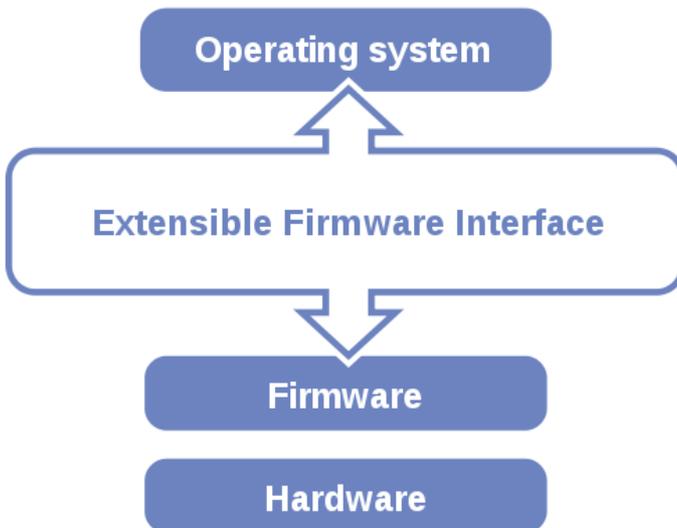

Figure 5-1. Extensible Firmware Interface Diagram

EFI BIOS provides an user interface that allows you to modify hardware configuration, e.g. change the system date and time, enable or disable a system component, determine bootable device priority, set up personal password, etc., which is convenient for engineers to perform modifications and customize the computer system and allows technicians to troubleshoot the occurred errors when the hardware is faulty.

The BIOS setup menu allows users to view and modify the BIOS settings for the computer. After the system is powered on, users can access the BIOS setup menu by pressing or <Esc> immediately while the POST message is running before the operating system is loading.

All the menu settings are described in details in this chapter.

5.2 Accessing Setup Utility

After the system is powered on, BIOS will enter the Power-On Self-Test (POST) routines and the POST message will be displayed:

Press <Esc> (the one that shares the decimal point at the bottom of the number keypad) to select SCU icon to access the Setup program. In a moment, the main menu of the Insyde Setup Utility will appear on the screen:

You may move the cursor by <↑> and <↓> keys to highlight the individual menu items. As you highlight each item, a brief description of the highlighted selection will appear at the bottom of the screen.

The language of the BIOS setup menu interface and help messages are shown in US English. You may use <↑> or <↓> key to select among the items and press <Enter> to confirm and enter the sub-menu. The following table provides the list of the navigation keys that you can use while operating the BIOS setup menu.

System BIOS Update Procedure

System BIOS Update from O.S.

- 1** Prepare a bootable media (e.g. USB storage device) which can boot the system to UEFI32 prompt.
- 2** Download and save the BIOS file (e.g. MH57520PTx.exe) to the bootable device.
- 3** Press the Power Button to boot up the system into the O.S with USB storage device (Windows 10 32 bits)
- 4** Run the BIOS file (e.g. MH57520PTx.exe) in USB storage device on O.S (Windows 10 32 bits)
- 5** During the update procedure, you will see the BIOS update process status and its percentage. Beware! Do not turn off system power or reset your computer if the whole update procedure is not complete yet; otherwise, it may crash the BIOS ROM and the system will be unable to boot up next time.
- 6** After the BIOS update procedure is completed, the following message will be shown (e.g. Updating Block at FFFFFFFFh (100%):

C:\Users\pp\AppData\Local\Temp\7zS438C.tmp\H2OFFT-W.exe
